

CIRRUS SR20

Boeing Employees Flying Association

Aircraft and Training Overview

Howard Wolvington/Charles Mallory

BEFA CIRRUS Check Pilots

Objectives of This Presentation

- ▶ Provide some reasons to invest in SR20 training
- ▶ Provide a high level overview of the aircraft
- ▶ Point to resources which further describe it
- ▶ Identify Pre-Training Activities
- ▶ Communicate the Training Process
- ▶ Provide a basic understanding of the Avidyne IFD 440s

Why ? – Howard's 11 "F"s

- ▶ **F**uturistic
- ▶ **F**antastic **F**it, **F**inish and **F**eel
- ▶ **F**ast
- ▶ **F**reedom with **F**ancy Avionics (TAA Aircraft)
- ▶ **F**amily (Safety)
- ▶ **F**un
- ▶ a**F**fordable

Cirrus SR20 N662AJ Avidyne 440 NAV/COM/GPS Upgrade

Training Advantages

- Low wing, streamlined airframe characteristics
- Higher cruise speeds with lower fuel burn
- Requires `Thinking Ahead` and energy management
- Technically Advanced Aircraft (MFD, PFD, Autopilot)
- Modern FMS architecture similar to commercial aircraft
- IFD 440s Integrate well with STEC-55 Autopilot
- Enroute VNAV capable
- 2-way Wi-Fi connection with Foreflight for flight plans

Cirrus SR-20 target audience?

- ▶ Instrument rated members looking to commercial flying (FMS type interface and higher speeds)
- ▶ Instrument and commercial students (TAA Aircraft)
- ▶ Private pilots desiring aircraft with better cruise performance and schedule availability.
- ▶ Upgrade step before SR-22T
- ▶ Members and family members with safety concerns (CAPS)

Presentation Agenda

- **SR20 W&B and Performance capabilities**
- **SR20 Systems overview**
- **SR20 Avionics overview**
- **How to prepare for BEFA SR20 Transition Training**
- **Avidyne IFD 440 Systems and Training Overview**

Useful load is close to that of a 172S but cruise performance is 10 kts faster with less fuel burn than a 182.

Cruise Performance

- At 6000 P.A. and 70% power produces nearly 150KTAS at 11.1 GPH

Cirrus Design
SR20

Section 5
Performance Data

Cruise Performance

Conditions:

- Mixture Best Power
- Cruise Weight.....2600 LB
- WindsZero

Example:

- Outside Air Temp 29° C
- RPM 2700 RPM
- Cruise Press Alt 8000 FT

Note: Subtract 10 KTAS if nose wheel pant and fairing removed. Lower KTAS by 10% if nose & main wheel pants & fairings removed. Cruise Pwr above 85% not recommended.

% Power (22.2 MAP) 73%
True Airspeed 154 Knots
Fuel Flow 11.4 GPH

Limitations

Maximum Takeoff Weight: 3000 lbs.

Maximum Landing Weight: 2900 lbs.

N662AJ Empty Weight: 2153 lbs.

N662AJ Useful Load: 847 lbs.

N662AJ Passenger/Baggage @ full fuel: 511 lbs.

Maximum Operating Altitude 17,500 feet msl

Not approved for known ice or aerobatics

Flight Controls

Controls actuated through use of side control yokes

System uses a combination of push rods, cables and bell cranks for control actuation

Aircraft trim uses hat switch for both aileron and elevator trim, as well as autopilot disconnect

Pilots feels pressure against trim springs as well as air loads

Rudder System

- ▶ Incorporates a rudder-aileron interconnect
- ▶ Rudder deflection will provide a maximum of 8° down aileron travel at full deflection
- ▶ Aileron actuation will not cause rudder deflection
- ▶ Most noticeable during high power/low speed operations and taxi operations

Nose Gear

- ▶ Constructed of tubular steel
- ▶ Attached to the engine mount
- ▶ Nose wheel is free casting
 - 216° of travel (108° either side of center)
- ▶ Aircraft is controlled directionally through differential braking
- ▶ Nose wheel tire
 - 5.00 x 5
 - Inner tube type

Taxiing and Braking Techniques

- ▶ **CIRRUS aircraft requires a combination of rudder and differential braking for directional control on the ground.**
- ▶ **Use the least amount of brake pressure to maintain directional control during the taxi.**
- ▶ **Use power to control speed during the taxi.**
 - **Reduce power to slow down and then apply brakes as necessary.**
- ▶ **Avoid taxiing at high power settings and speeds.**

Engine

- ▶ **Powered by a Teledyne Continental IO-360-ES engine**
 - **Six cylinder**
 - **Normally aspirated**
 - **Fuel injected**
 - **200 horsepower @ 2700 RPM**
 - **2000 Time Between Overhaul (TBO)**
- ▶ **Dual magneto ignition system**

Throttle Linkage

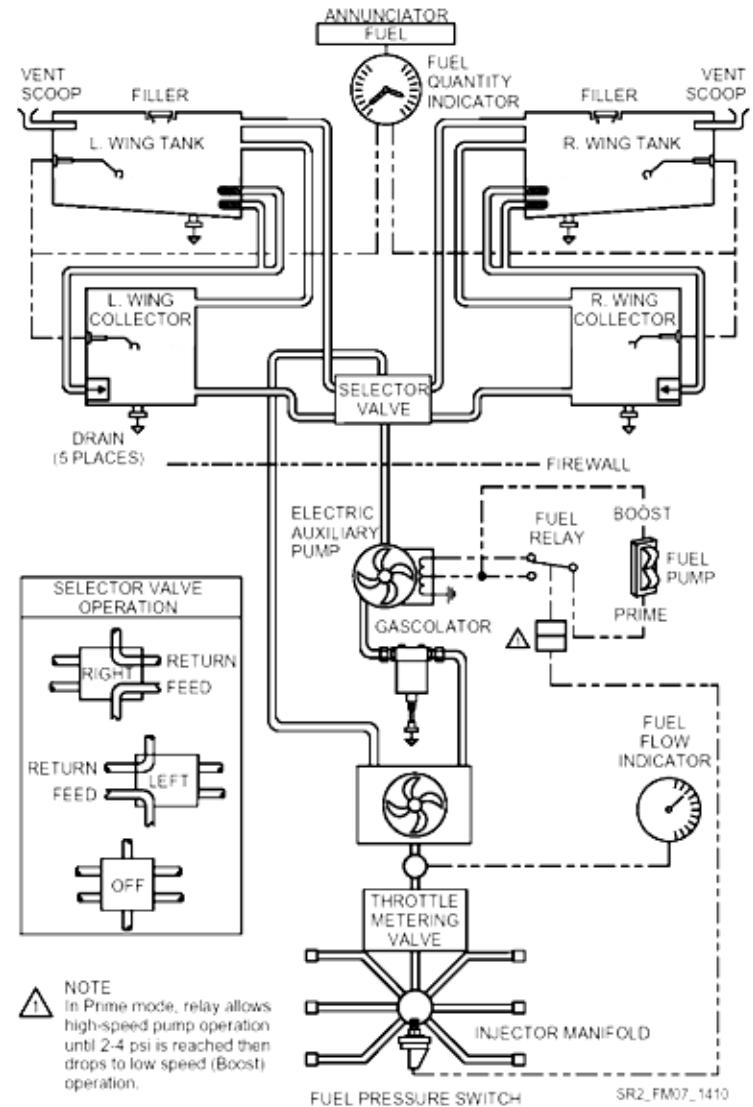

A cam system on the throttle linkage controls propeller RPM throughout the throttle range.

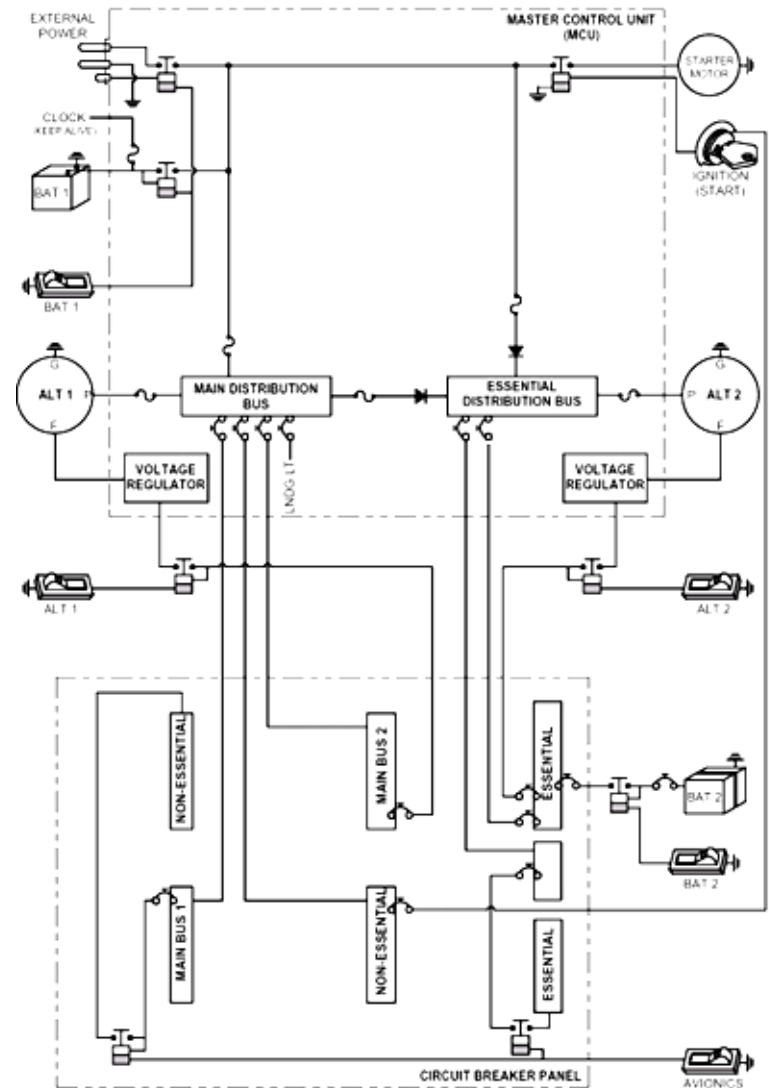

Fuel System

- ▶ Wing Tanks (L/R)
- ▶ Collector Tanks (L/R)
- ▶ Quantity Indicator
- ▶ Selector Valve
- ▶ Electric Fuel Pump
- ▶ Gascolator
- ▶ Engine Driven Fuel Pump
- ▶ Fuel Flow Indicator
- ▶ Throttle Metering Valve
- ▶ Injector Manifold
- ▶ **56 Gallons Usable Full Fuel**
- ▶ **12 Gallons/hour at 75% power**

Electrical System

- ▶ Sources of electrical power connect to distribution buses located within the Master Control Unit
 - ALT 1 / BAT 1 deliver power to the Main Distribution Bus and through diode also to the Essential Distribution Bus
 - ALT 2 / BAT 2 deliver power to the Essential Distribution Bus
- ▶ PFD, GPS1 & Autopilot are on the EDB

CAPS Safety Features

- ▶ **CAPS: CIRRUS Aircraft Parachute System**

 - The aircraft design advisory board included former military pilot and a pilot who had survived a mid-air collision

- ▶ **Inflatable shoulder harness restraints**

- ▶ **Seat pans are a crushable aluminum structure to further cushion vertical g forces.**

Master OFF & Passengers Ready
Before Ground Contact

How to Pull the CAPS Handle

Pull the activation T-handle from its receptacle. Pulling the handle removes it from the o-ring seal that holds it in place and takes out the slack in the cable (approximately two inches of cable will be exposed). Once the slack is removed, the T-handle motion will stop and greater force will be required to activate the rocket.

CAPS Deployment Procedure

CAPS Deployment Results

- ▶ **Mid-air Collision**
- ▶ **Structural failure**
- ▶ **Loss of Control**
 - **Control System Failure**
 - **Sever Turbulence Causing Upset**
- ▶ **Landing in inhospitable terrain**
- ▶ **Pilot Incapacitation**

Note - This list is not intended to be exclusive, but merely illustrative of the type of circumstances when CAPS deployment could be the only means of saving the occupants of the aircraft.

CAPS Considerations

- ▶ Aircraft is not approved for aerobatics
- ▶ The only demonstrated recovery method from a spin is CAPS deployment
- ▶ Occupants may be injured in a CAPS landing
- ▶ Aircraft may be destroyed in a CAPS landing

- ▶ Note: 26G front seats may be damaged by standing on seat or putting a knee on the seat – **put only your butt on the seat!!!**

Seat Belt Airbag Assembly

The four point restraint consists of the airbag unit and the gas hose attached to one side of the shoulder harness of restraint system. The opposite shoulder harness is padded for comfort and to match the airbag side.

The shoulder harness is tightened by an dual inertia reel; the lap belts are manually adjustable.

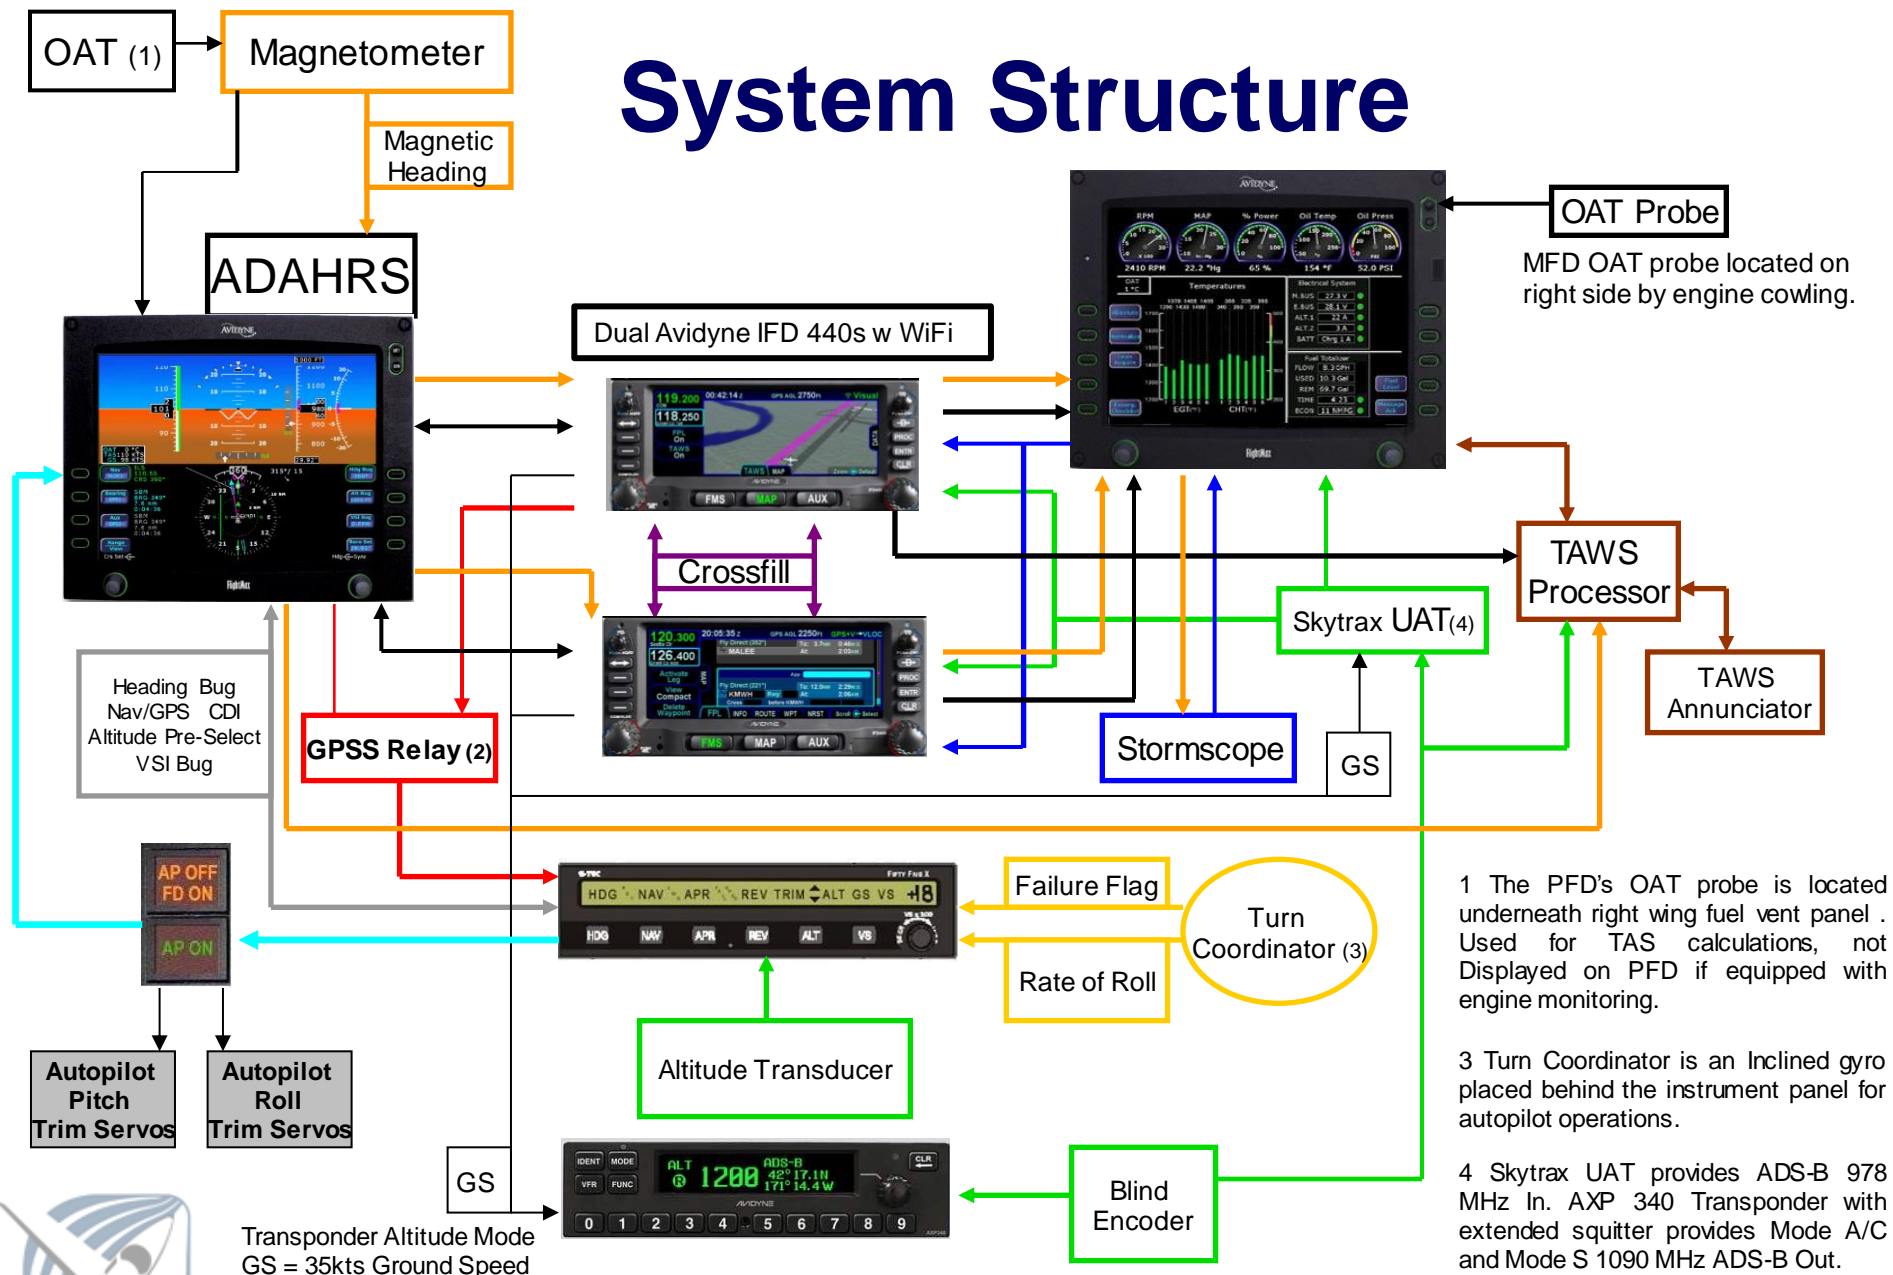

Avionics Summary

- ▶ **Primary Flight Display (PFD)**
- ▶ **Multifunction Flight Display (MFD)**
 - **Moving map with flight plan**
 - **Flight plan and “Nearest” information**
 - **ADSB Weather displayed.**
 - **Cmax approach charts (Jeppesen)**

GS = 35kts Ground Speed
Activation Switch

2 Used during a Complete PFD Failure for proper autopilot operations. Relay is connected when PFD has no electrical power (CB's pulled).

Avionics: PFD

- ▶ The flat panel liquid-crystal display is integrated with an Air Data / Attitude Heading Reference System (ADAHRS)
- ▶ Magnetometer (Magnetic Heading information)
- ▶ Three axis solid state gyro and accelerometer system
- ▶ AHRS Provides:
 - Pitch
 - Roll
 - Yaw

Primary Flight Display

- Upper Half of Display for basic flight instrument data
- Includes Autopilot Annunciations and steering bars.
- Lower Half has HSI and integral moving map
- Nav button switches primary source display
- Bearing and Aux buttons for RMI type display of secondary Nav sources
- Buttons for knob control of Hdg, Alt, VSI and Baro values

Fuel Initialization Page

Displayed on startup or when the "Initial Fuel" button is pressed in the engine monitoring page.

The MFD will display the fuel initialization page and ask the pilot to input the amount of fuel added to the aircraft.

Buttons for "**Fuel Full**" and "**Fuel to Tabs**" are available to quickly set commonly used fuel amounts. In addition the right knob can be used to fine tune the amount of fuel added per gallon.

When the desired amount has been entered, pressing the "**Fuel Done**" button will exit the fuel initialization page.

Multi-Function Display

- Map w Weather, Flight plan graphic display and Track information

MFD Terrain Warning Displays TAWS

- Displays automatically when triggered by proximity.

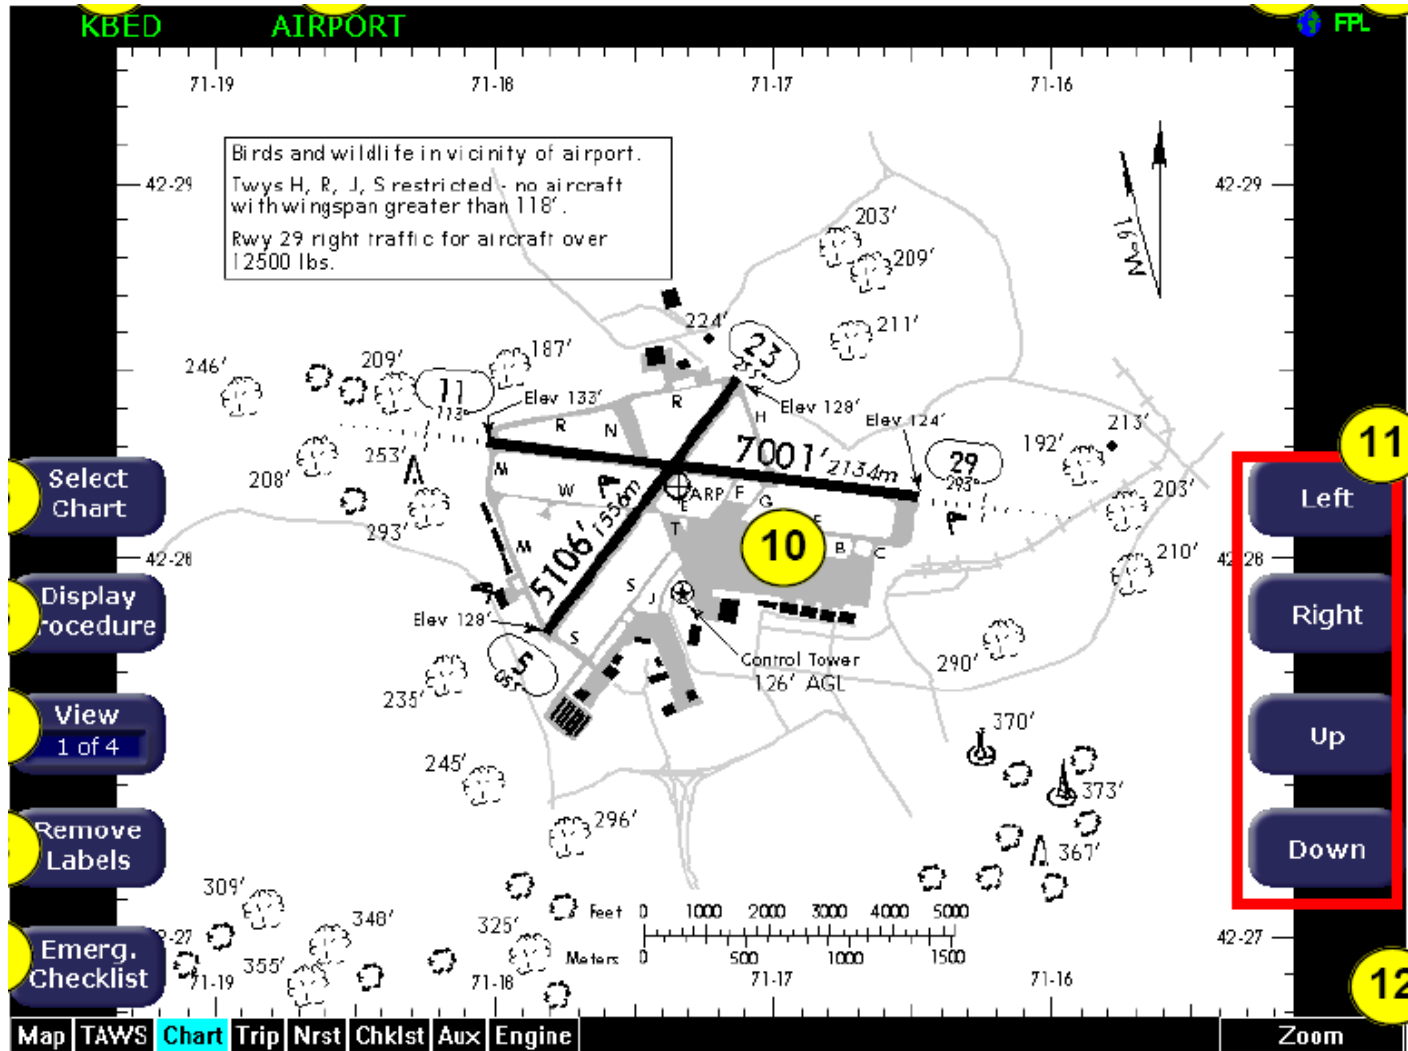

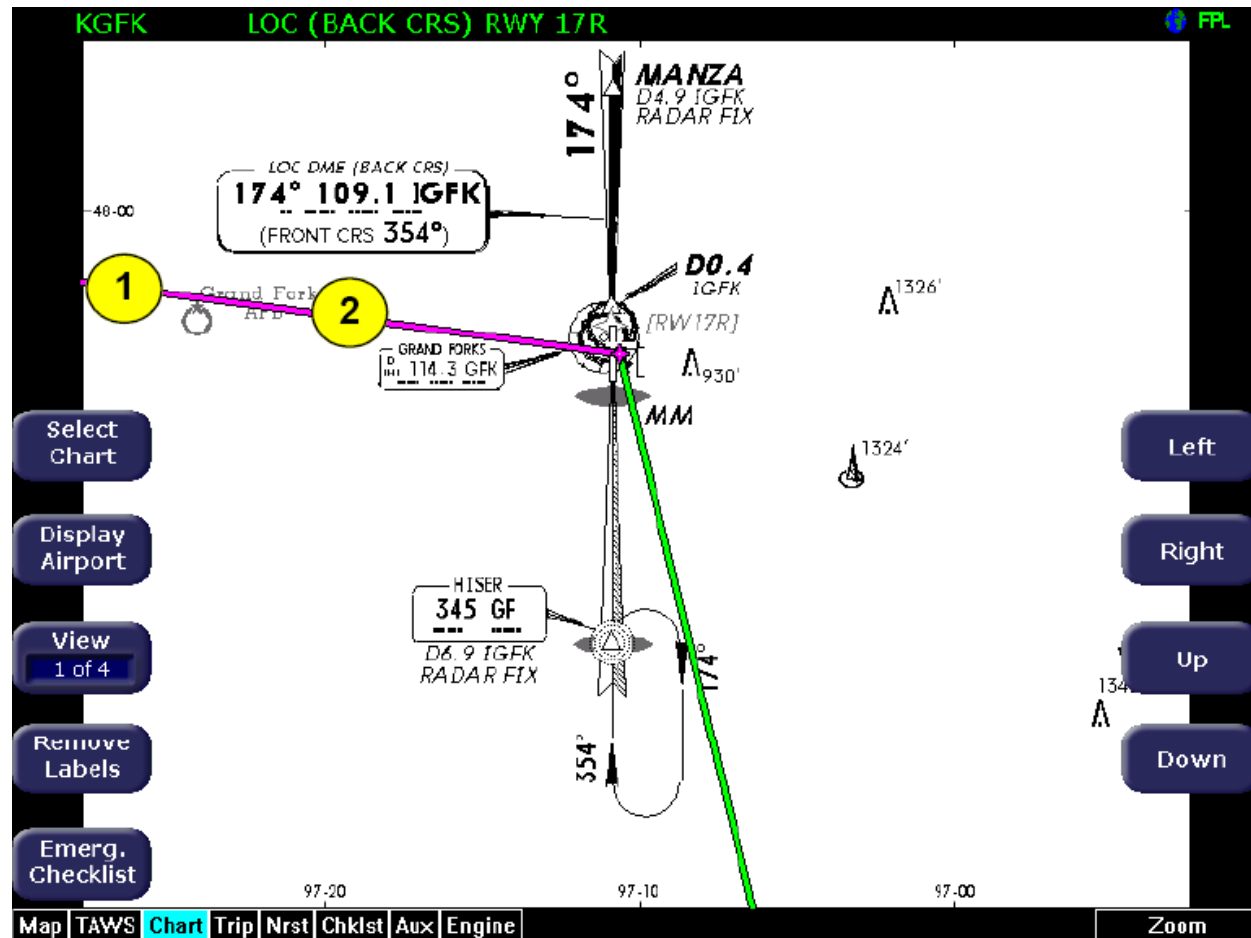

Chart Function

- Jeppesen Chart subscription
- Automatic display of taxi chart

Map display of chart

- Flight plan track superimposed on chart
- Includes own ship and active leg displayed

Trip information

- Displays current route from IFD 440s .
- More easily visible to pilot due to larger screen and location

IFD ICAO Filing Codes

RECOMMENDED ICAO EQUIPMENT CODES

Avidyne recommends the following set of ICAO codes when filing for aircraft equipped with at least one IFD.

- B - LPV
- G - GPS
- R - PBN Approved
- S - VHF, VOR, ILS †
- Y - VHF w/8.33 kHz spacing †

With a PBN string of:

- A1 - RNP10 (Oceanic) (may require a LOA)
- B2 - RNAV-5 (Enroute)
- C2 - RNAV-2 (RNAV Q-Routes and T-Routes over land)
- D2 - RNAV-1 (Terminal)
- L1 - RNP4 (Oceanic) (may require a LOA)
- O2 - RNP1 (Terminal)
- S1 - RNP APCH (RNAV and/or GPS Approaches without RF legs)

And if combined with an AXP340 or AXP322 transponder, the surveillance codes are:

- E - Mode S, including aircraft ID, pressure altitude, extended squitter
- B1 - ADS-B with dedicated 1090 MHz ADS-B Out capability

And if a SkyTrax100 (MLB100) receiver is installed,

- U2 - 978 (UAT) In receiver

CIRRUS Recommended Training

- ▶ **Scenario Based Training**
- ▶ **Emphasis on Aeronautical Decision Making and Single Pilot Risk Management**

Training Includes

- ▶ **Review of Systems, Limitations, W&B, Performance**
- ▶ **Normal Operations with automation**
- ▶ **Maneuvers**
- ▶ **ADM: Emergency and Abnormal Procedures**
- ▶ **Emergency procedures with automation**
- ▶ **Emergency procedures without automation**
- ▶ **Checkride**

Training time depends on VFR/IFR, experience, & preparation (IFD 440 and autopilot in particular)

Cirrus SR Series Workbook addendum SR20 N662AJ Avidyne IFD 440

These questions are an addendum to the Cirrus SR-20 workbook and intended to address only some of the most important functions of the IFD 440. The avionics changes from the Garmin 430 to the Avidyne IFD 440 are significant. All pilots are urged to become familiar with all the functions and capabilities of these units and their interface with N662AJ systems.

Cirrus Learning Center Resources

The screenshot shows a web interface for a learning catalog. At the top, there is a dark blue header with the text "LEARNING CATALOG" in white. Below the header is a navigation bar with several dropdown menus: "Courses Show All", "Aircraft SR20 Avidyne...", "Avionics Show All", "Training Show All", and "Sort Category". The main content area is titled "Transition Courses" and features a single course card. The card includes a photograph of a Cirrus SR20 aircraft in flight, followed by the text "SR20 Avidyne Entegra Transition (VFR)" and "By Cirrus Aircraft".

A SIMPLY SMARTER WAY TO FLY

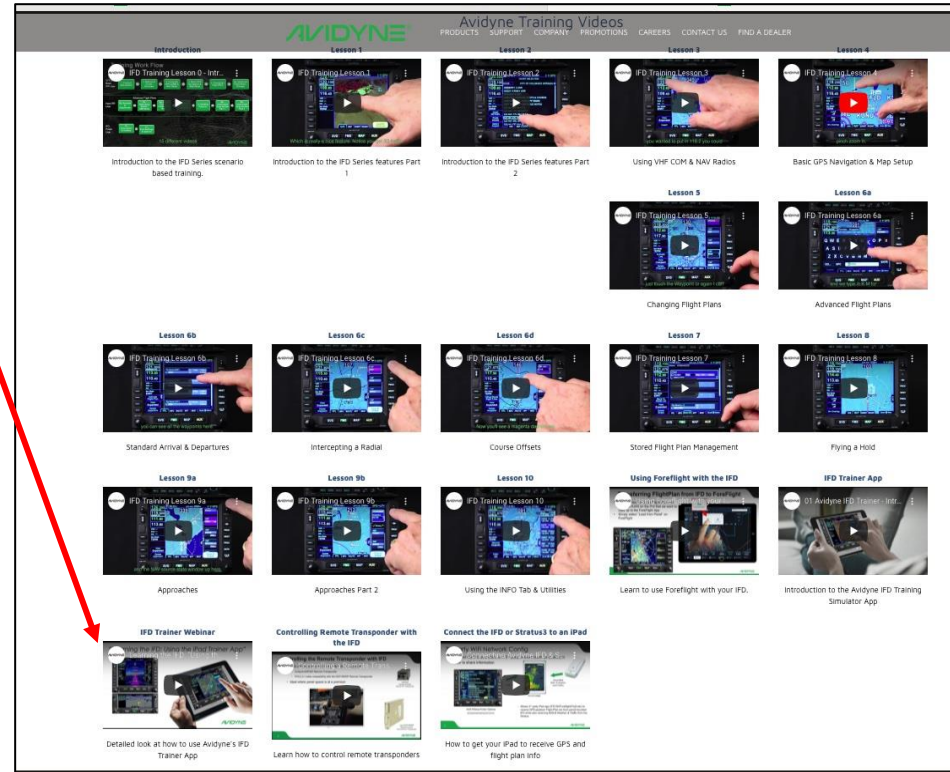

THE COMMUNITIES WE SERVE

Whether you fly personally or for business, in fixed-wing or rotary aircraft, through all phases of flight, Avidyne avionics systems are engineered to make your flying safer, easier and more enjoyable.

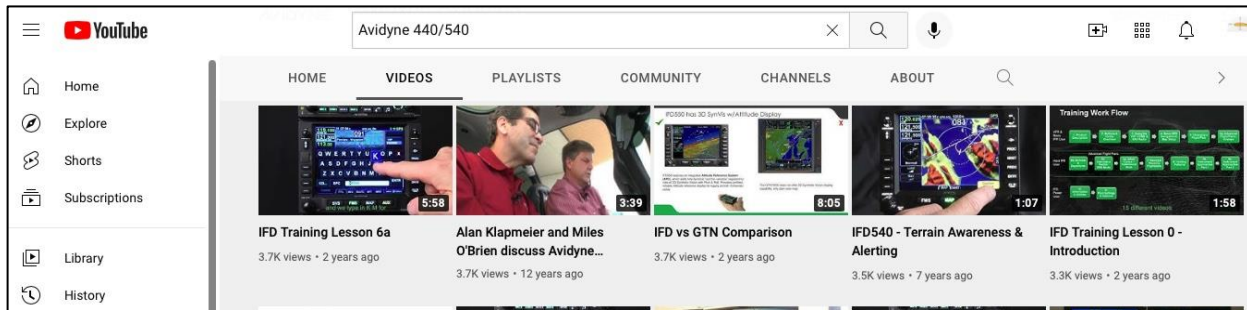

Avidyne Support IFD 440/540 Training Videos

- ▶ **Avidyne requires you to register to view, which may generate some informational emails, but you'll probably access their site for other information anyway.**
- ▶ **The IFD Trainer Webinar is a bit lengthy (use 1.25 speed) but very informative.**
- ▶ **It will walk you through the setup process and all the controls and features.**
- ▶ **The Lessons 1 – 10 are a quick method to review the various functions. It is also accessible through the tutorials list within the IFD Trainer App.**

Avidyne Training using YouTube Channel videos

- There are several other YouTube contributors who have posted videos relating their experiences using the IFD 440/540.
- It is helpful to see the devices in action and hear the comments from actual users.

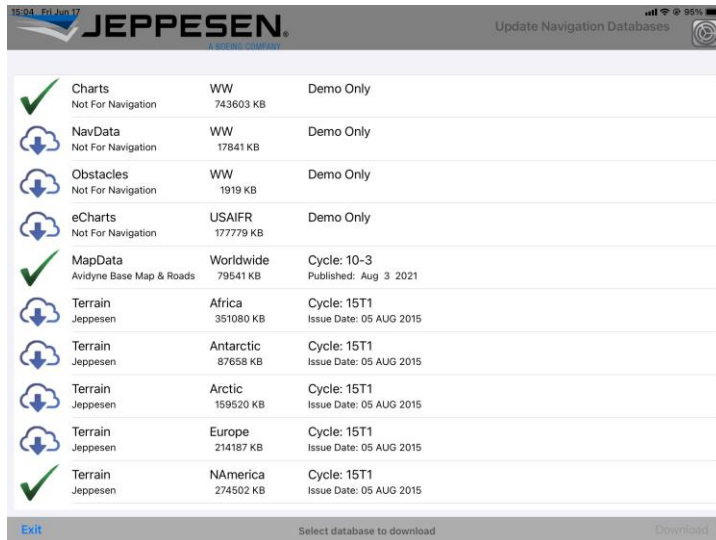

IFD Applications for iPad

- ▶ Start with downloading the iPad App from the App store.
- ▶ IFD Trainer App for familiarization and practice.

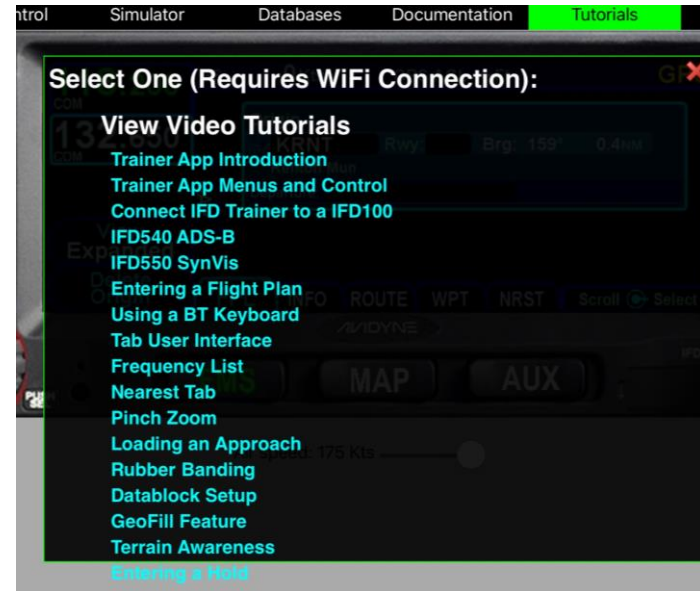

Database Selection and Tutorial List

- ▶ Within the trainer app is a tutorial list on how to setup and run the app to allow pilots to practice using the navigator.
- ▶ Download the demonstration database.

The screenshot shows the JEPPESEN app interface with a list of databases. The status bar at the top indicates the time is 15:04 on Fri Jun 17, and the battery is at 95%. The app title is JEPPESEN, and there is an option to 'Update Navigation Databases'. The list includes various database types with their respective sizes and update cycles.

Database Name	Region	Size	Update Cycle
Charts	WW	743603 KB	Demo Only

Basic IFD 440 Skills required

Completed		Task	Sub-Task
Ground	Air	VHF Comm and NAV, NAV Mode and Network Symbols	Network Symbols
		Tune/Swap Comm and NAV Radio	Knob/Touch Screen
		Quick Tune Frequencies and Emergency Freq	Swap button 3 sec.
		NAV Source: VLOC or GPS- OBS	Pending mode is Blue
		Adjust Selected Course	Use of PFD CRS knob
		Activate Wi-Fi, Bluetooth, Source Symbols	Green=Active
		Connect and pair iPad to IFD (AUX Setup, Devices)	Devices 'Always'
Building and Activating Flight Plans			
		FMS Pages Function Key and Map Tab	Rocker Tab displays FPL
		Enter Origin/Destination Airports	Blue
		Cyan cursor types	Insert, Edit, Field Cursors
		Add New Waypoints/Airways	
		Insert/delete waypoints	Use Insert cursor
		Creating or closing Flight Plan gaps	
		Review and Activate Flight Plan	FPL Split view or MAP Key View 'Cursor' LSK to step
		FMS INFO Tab/ Edit Identifier/LSK Paste function	Autotune Frequencies
FMS Function Key and using ROUTE List			
		Route Page management Copy, Delete, Rename RTE	
		Activate a saved Flight Plan	
		Send, Receive, Activate Flight Plan changes from EFB	
MAP Display and MAP Page Function Key			
		Review Flight Legs on Map	Slider on FPL Tab
		Expand/Compact/Cursor Modes	Cursor to step through
		Direct-TO a wpt not in plan (Creates Gap in route)	NRST Tab use
		Scale changes and declutter Map	
		Display Datablocks Tab, MAP function split view	User profile configurable
		Changing North-Up, HDG-UP	Tap bottom right button
		SVS mode use	Use with Datablocks
		Enter a Visual Approach from the downwind leg	PROC Key functions
Information, Utilities and User Profiles			
		Select a different the User Profile	View BEFA VFR presets
		NRST: LSK for ARPRT, VOR, FSS, ARTCC Etc.	Map split view avail +MFD

Completed		Task	Sub-Task
		INFO Tab: Freqs etc.	Get info for off-route Airport
		Alerts: Warning, Caution, Alert	ALERT: to review
		Enable/Disable Airspace Warnings	AUX FMS SETUP options
		Check the Database expiration (AUX SYS Tab) LSK	Updating Database
		UTIL: Timers and Calculator, Checklists	
IFR Checkout			
Building Activating and Modifying Flight Plans			
		Add SID or STAR	Select runway Select transition
		Add crossing restriction with field cursor	Field cursor white
		Create/Cancel Offset Leg	Uses current leg
		AUX SYS RAIM Predictor (Calculator function)	RAIM calculator
		Intercept a Radial TO and FROM a GPS wpt or VOR	Direct To and OBS TO/FROM
		Explain TOD point and Distance -To-Altitude Arc	Vert Spd req'd datablock
Holding			
		Add/Modify Holding Pattern	Published holds offered
		Exit a Hold (there are 3 ways)	Direct -To a FPL wpt Exit Hold key Direct to the Hold fix
Approaches			
		Enter an Approach, transition and runway	Review for Gaps
		Activate an Approach	Direct-To Waypoint or Activate leg
		Confirming APP mode transition	Armed Mode is →Blue
		Auto/Manual Source switching on Approach and Missed Approach	GPS-VLOC /VLOC-GPS AUX Setup feature
		Intercept DME Arc	Activate arc leg
		Procedure Turns, Hold-In-Lieu of PT	Can delete hold-in lieu
		'Enable/Activate Missed' LSK prompt Missed Approaches requiring climb to alt before turn	Auto seq is a User Opt 'Sequence Leg' required
		Retry Approach function (L4 LSK)	Loads VTF transition
		Add a second approach to your Destination	Add a wpt between add'l Dest Airport wpts then (Use App Field not PROC)
		Add second destination	Add wpt after MAP hold
		Retry Approach function	Loads VTF
